RE: Glasway, LLC-NPDES TN0003905  
NPDES permit update  
Additional information request

Dear Mrs. Sparks,

Glasway, LLC ("Glasway") located in Kingsport, TN is providing notification to the Division of Water Pollution Control ("Division") about additional information needed for the National Pollutant Discharge Elimination System (NPDES) permit renewal package.

During the original application process, antimony was marked to as a possible parameter for discharging. Trace amounts of antimony are used in glass manufacturing for solar applications. Although we are not aware of antimony in the outfall, we are allowing for the possibility of antimony from the glass edging department. We would request that the antimony parameter be sampled on a quarterly basis since the potential to discharge is very minimal.

The request from the Division was to collect a waste water sample for antimony. Due to the processes in the beginning phase, the edging department will not generate water for several weeks. The facility has not been in operation for more than a year.

If you have any questions or require additional information, please contact me or Michael Fox.

Very kind personal regards,

A handwritten signature in black ink, appearing to read "Chris Cording", with a long, sweeping horizontal line extending to the right.
